

RSX

Extreme Force Actuator

RSX Electric Rod-Style Actuator

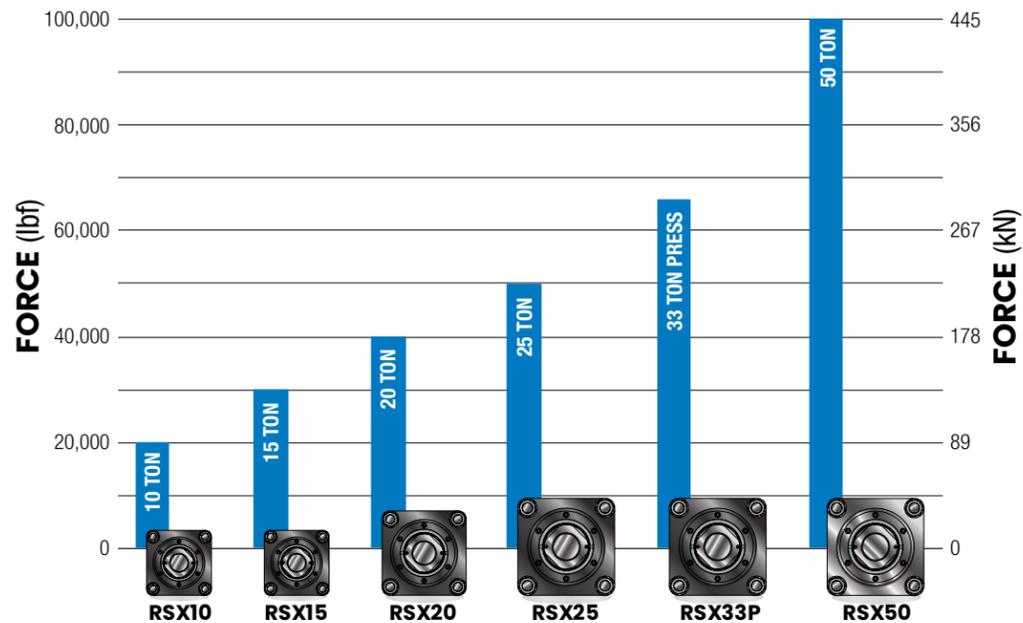

The RSX is a high capacity industrial actuator that is an ideal choice for replacing hydraulic cylinders. Designed for 100% duty cycle, rugged service and long life it is available for forces up to 100,000 lbf (445 kN). Choose either ball screws or planetary roller screws for long lasting consistent performance. Tolomatic's Your Motor Here program allows the RSX to easily mount most servo motor and gearboxes on the market.

Powerful.

Precise.

Efficient.

RSX Force Comparison

Superior Construction

Aluminum parts are Type III hardcoat black anodized for high surface hardness

Thrust Tube

Salt bath nitride treatment provides excellent corrosion resistance, surface hardness and is very resistant to adherence of potential contaminants

Field Replaceable Cartridge

Durable seal design prevents contaminants from entering the housing for extended life of the actuator

Additional rod scraper available with IP67 option for high contaminate environments

Your Motor Here

Specify the motor to be installed and actuator ships with proper mounting hardware

Internal Anti-Rotate

Composite bearings prevent rotation of the thrust tube

High Positional Accuracy

Precision ground planetary roller screws provide the highest force and life ratings available

	SCREW ACCURACY	
Roller Screw	± 0.0004"/ft.	± 0.0102mm/300mm
Ball Screw	± 0.004"/ft.	± 0.102mm/300mm

Ball screw option also available

Motor Orientation

Inline option directly couples the driving shaft

Reverse-parallel option minimizes the overall length and offers a belt reduction drive with a 1:1 or 2:1 ratio

High Power Timing Belt

Carbon fiber tensile reinforced synchronous belt to ensure smooth transmission of high torques in a compact design.

High Force Angular Contact Bearings

Four ball bearings to support high axial loads & forces for long life

Mounting Options

- Front Flange
- Extended Tie Rods
- Trunnion
- Mounting Plates

Rod End Options

- Rod Clevis
- Threaded Rod (standard)
- Extended Rod

Sensor Options

- Solid state NPN, PNP or Reed
- Tie Rod Clip

Environmental Protection

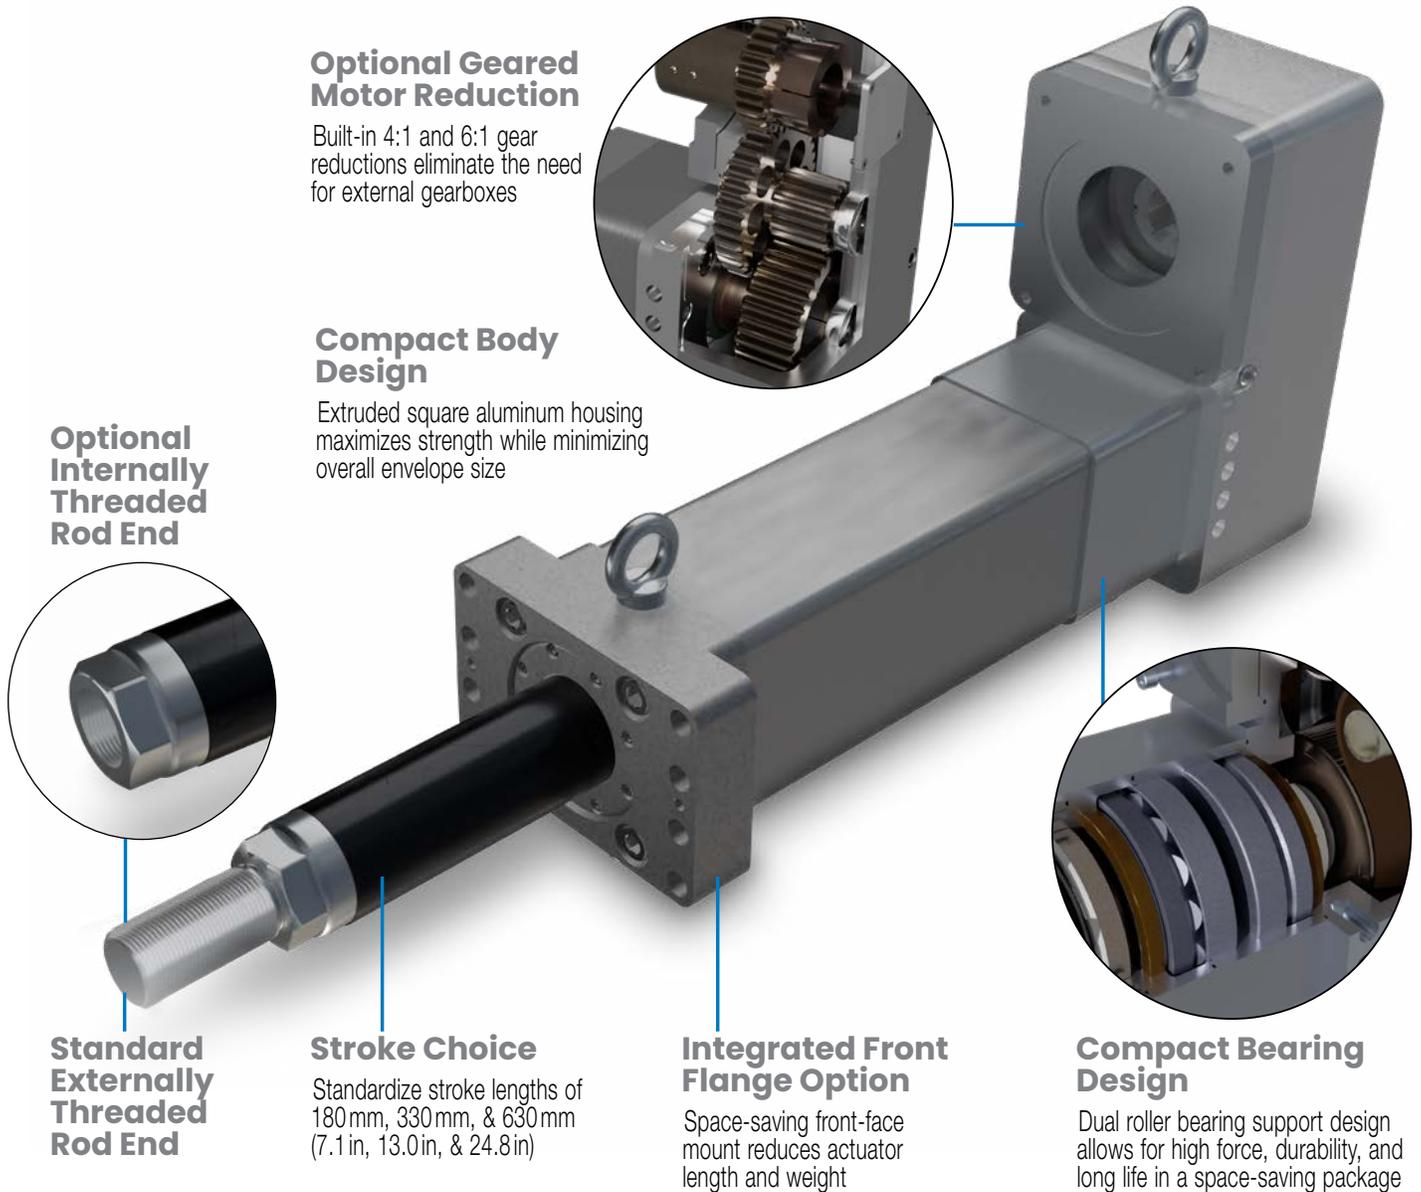

- IP65 standard
- IP67 Option

Oil Cooled

For extended high duty cycle/high force performance (see pg. 5)

RSX50 Next Generation Design

The RSX50 is the latest and largest design in the RSX high force actuator series. This new size is designed using Tolomatic's vast experience in the high force market to be as compact and efficient as possible, without sacrificing life or durability. The RSX50 supports up to 6 million pressing moves at 50 tons of force, leading the market in actuator life.

Optional Geared Motor Reduction

Built-in 4:1 and 6:1 gear reductions eliminate the need for external gearboxes

Compact Body Design

Extruded square aluminum housing maximizes strength while minimizing overall envelope size

Optional Internally Threaded Rod End

Standard Externally Threaded Rod End

Stroke Choice

Standardize stroke lengths of 180 mm, 330 mm, & 630 mm (7.1 in, 13.0 in, & 24.8 in)

Integrated Front Flange Option

Space-saving front-face mount reduces actuator length and weight

Compact Bearing Design

Dual roller bearing support design allows for high force, durability, and long life in a space-saving package

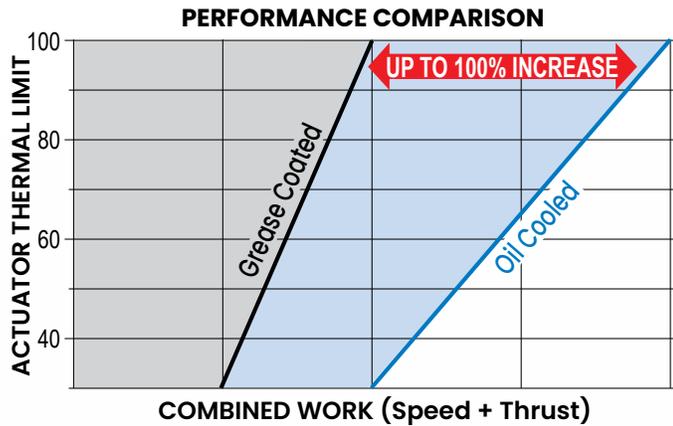

RSX Oil Cooled Option

What does Oil Cooled mean?

An unpressurized synthetic oil bath around the screw and nut replaces the standard (extreme temperature and pressure rated) grease. The oil bath efficiently reduces internal temperatures while simultaneously providing lubrication.

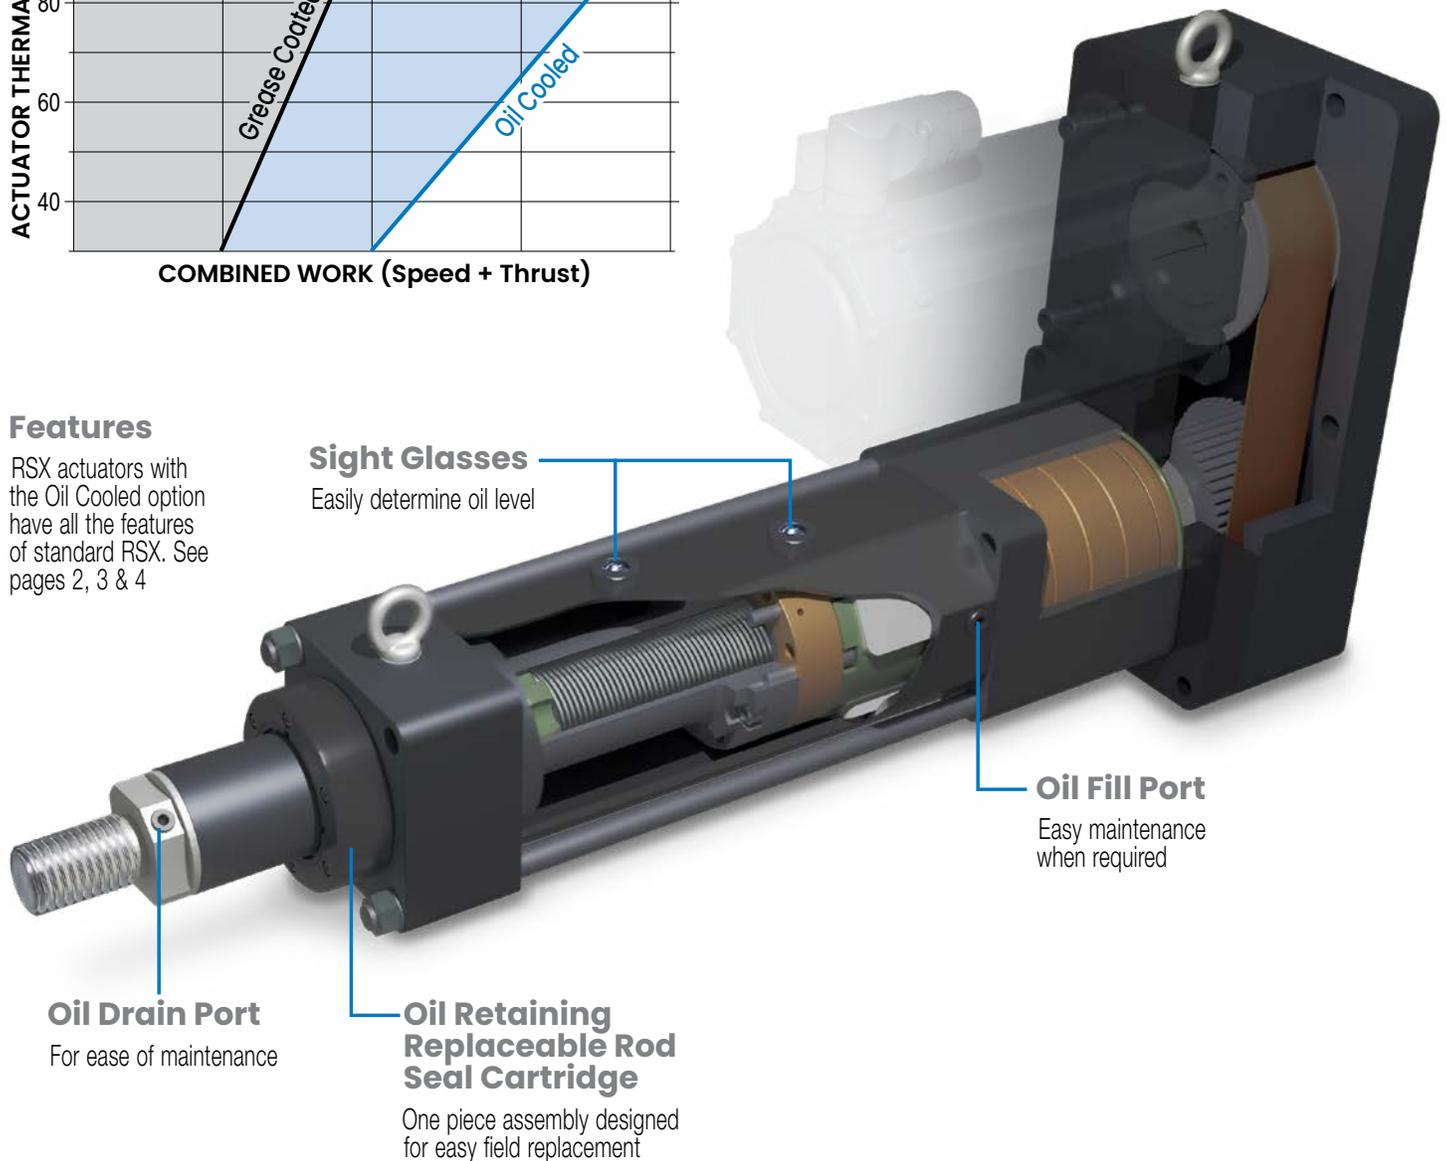

Provides up to 2 times the work capacity compared to standard grease RSX actuators.

Available for all RSX sizes

Features

RSX actuators with the Oil Cooled option have all the features of standard RSX. See pages 2, 3 & 4

RSX Extreme Force, Hydraulic Class Electric Actuator

Screw Buckling Load

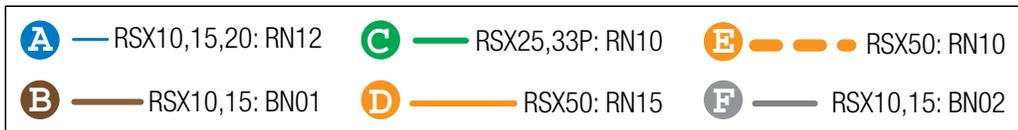

Critical Speed Capabilities

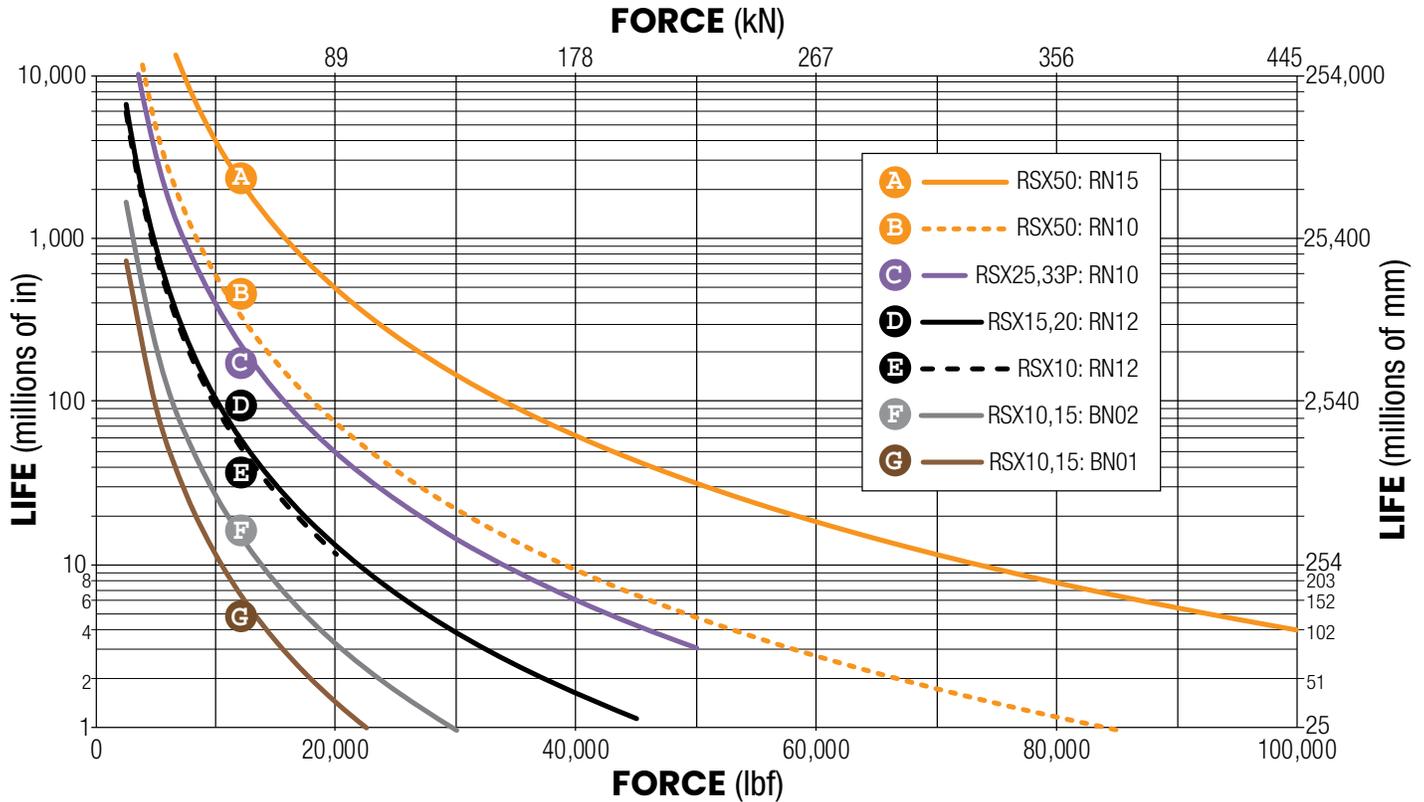

*NOTE: When using Trunion Mount, (TRR) consider the stroke to be longer when determining Critical Speed and Buckling Load:

STROKE ADDER		
	mm	in
RSX10	72.4	2.85
RSX15	72.4	2.85
RSX20	0.0	0.00
RSX25	108.0	4.25

RSX Extreme Force, Hydraulic Class Electric Actuator

Expected Life:

RSX Standard Actuators Expected Life:

NOTE: The L_{10} expected life of a ball or roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained actuators are expected to meet or exceed. This is not a guarantee and this graph should be used for estimation purposes only.

The underlying formula that defines this value is:

$$L_{10} = \left(\frac{C}{P_e} \right)^3 \cdot \ell \equiv$$

L_{10} = Travel life in millions of units (in or mm), where:

- C** = Dynamic load rating (lbf) or (N)
- P_e** = Equivalent load (lbf) or (N)
If load is constant across all movements then:
actual load = equivalent load
- ℓ** = Screw lead (in/rev) (mm/rev)

Use the "Equivalent Load" calculation below, when the load is not constant throughout the entire stroke. In cases where there is only minor variation in loading, use greatest load for life calculations.

Where:

$$P_e = \sqrt[3]{\frac{L_1(P_1)^3 + L_2(P_2)^3 + L_3(P_3)^3 + L_n(P_n)^3}{L}}$$

- P_e** = Equivalent load (lbf) or (N)
- P_n** = Each increment at different load (lbf) or (N)
- L** = Total distanced traveled per cycle (extend + retract stroke)
[L = L₁ + L₂ + L₃ + L_n]
- L_n** = Each increment of stroke at different load (in) or (mm)

RSX Press Model Expected Life:

In the event an RSX actuator is used in a press application where the press stroke distance is less than the lead of the screw, calculation of its L10 expected life is modified to consider only the press move, because in press (and similar) applications repeated high force cycles at the same position of the roller screw focus the stress in one area, which may limit the life of the device. For these cases the equivalent load value for the L10 calculation is replaced with the pressing force of the press move only and screw lead is removed from the equation:

The underlying formula that defines this value is:

$$L_{10p} = \left(\frac{C}{P_p} \right)^3$$

L_{10p} = Life in Millions of press cycles, where:

- C** = Dynamic load rating (lbf) or (N)
- P_p** = Pressing Force (lbf) or (N)

NOTE: The L10 life estimation method does not include failures caused by other conditions such as contamination, misalignment, improper lubrication and exceeding actuator specifications

RSX Extreme Force, Hydraulic Class Electric Actuator

Re-lubrication Recommendation:

On the RSX actuator there is a access hole on the side of the extrusion for applying grease directly to the nut.

Lubrication requirements for electric actuators depend on the motion cycle (velocity, force, duty cycle), type of application, ambient temperature, environmental surrounding and various other factors.

For many general purpose applications, Tolomatic ball screw actuators are typically considered lubricated for life unless otherwise specified, such as those actuator models outfitted with a re-lubrication feature. For roller screw or ball screw actuators outfitted with a re-lubrication feature, Tolomatic recommends to re-lubricate the actuator at least once per year or every 1,000,000 cycles, whichever comes first, to maximize service

life. For more demanding applications such as pressing, high frequency or other highly stressed applications, the re-lubrication interval for these actuators will vary and will need to be more frequent. In these demanding applications, it is recommended to execute at least 5 full stroke moves every 5,000 cycles of operation (or more frequent if possible) to re-distribute the grease within the actuator.

Refer to the [RSX Manual \(2171-4007\)](#) for detailed re-lubrication instructions for both standard grease and oil filled (OIL option) actuators.

Food Grade RSX

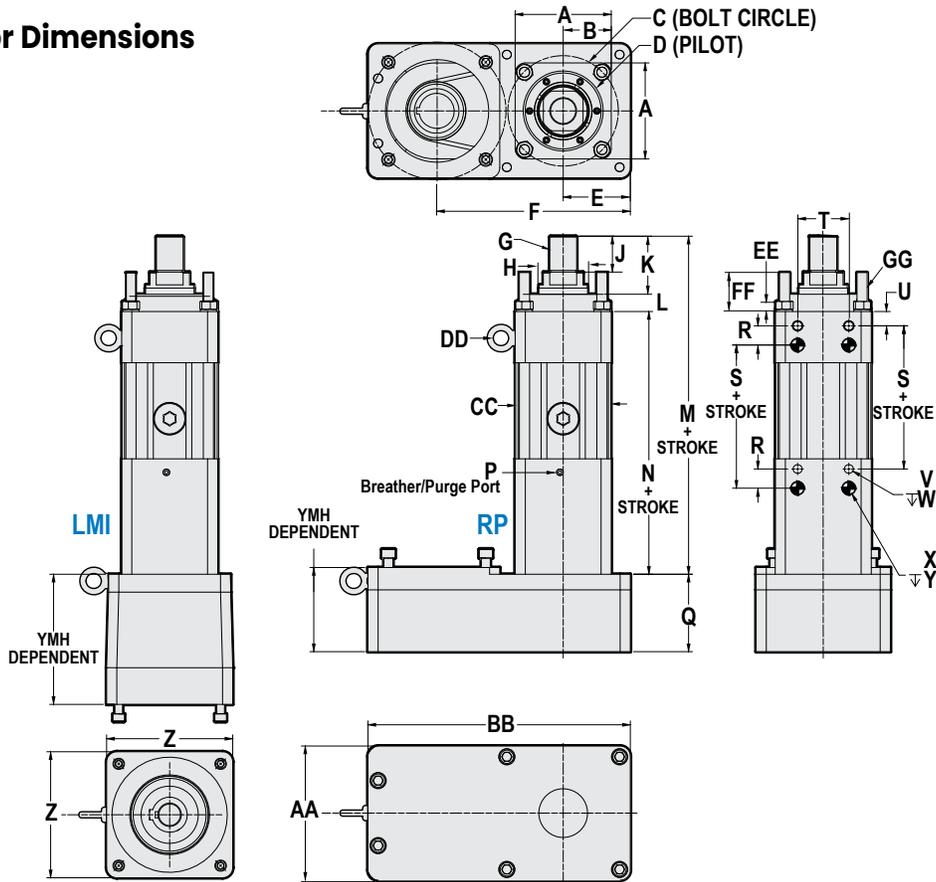

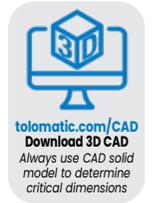

The food grade RSX is a great option for the food & beverage processing environment.

Contact Tolomatic for lead time and application review.

Rod Extension Option (XR) Not available for RSX50

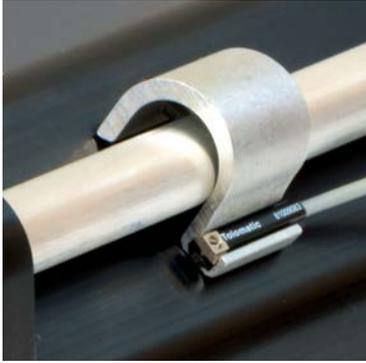

The thrust rod length can be extended by specifying the rod extension option. This does not increase the working stroke, only the length of the thrust rod.

NOTE: Please consult Tolomatic if your application requires rod extension length greater than 3.9 in (100 mm).

RSX Extreme Force, Hydraulic Class Electric Actuator

Switches

RSX actuators offer a wide range of sensing choices. There are 12 switch choices: reed, solid state PNP (sourcing) or solid state NPN (sinking); in normally open or normally closed; with flying leads or quick-disconnect.

Commonly used for end-of-stroke positioning, these switches allow installation anywhere along the entire actuator length. The internal magnet is a standard feature. Switches can be installed in the field at any time.

Switches are used to send digital signals to PLC (programmable logic controller), TTL, CMOS circuit or other controller device. Switches contain reverse polarity protection. Solid state QD cables are shielded; shield should be terminated at flying lead end.

All switches are CE rated and are RoHS compliant. Switches feature bright red or yellow LED signal indicators; solid state switches also have green LED power indicators.

	Order Code	Lead	Switching Logic	Power LED	Signal LED	Operating Voltage	**Power Rating (Watts)	Switching Current (mA max.)	Current Consumption	Voltage Drop	Leakage Current	Temp. Range	Shock / Vibration
REED		5m	SPST Normally Open	—	Red	5 - 240 AC/DC	**10.0	100mA	—	3.0 V max.	—	14 to 158°F [-10 to 70°C]	50 G / 9 G
		QD*											
		5m	SPST Normally Closed	—	Yellow	5 - 110 AC/DC							
		QD*											
SOLID STATE		5m	PNP (Sourcing) Normally Open	Green	Yellow	10 - 30 VDC	**3.0	100mA	20 mA @ 24V	2.0 V max.	0.05 mA max.		
		QD*											
		5m	NPN (Sinking) Normally Open	Green	Red								
		QD*											
		5m	PNP (Sourcing) Normally Closed	Green	Yellow								
		QD*											
		5m	NPN (Sinking) Normally Closed	Green	Red								
		QD*											

*QD = Quick-disconnect Enclosure classification IEC 529 IP67 (NEMA 6)

CABLES: Robotic grade, oil resistant polyurethane jacket, PVC insulation

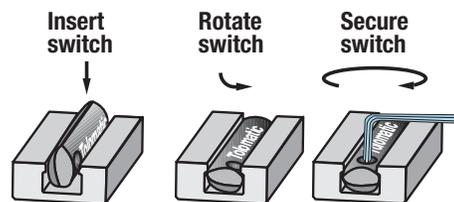

⚠️ **WARNING: Do not exceed power rating (Watt = Voltage x Amperage). Permanent damage to sensor will occur.

Switch Installation: RSX10, 15, 20, & 25

Place switch bracket onto any one of the four tie rods that run the length of the extruded tube. Insert the switch with set screw and the word "Tolomatic" facing up and slide into the mating slot on the bracket. Position the bracket with the switch to the exact location desired, with the bracket tight to the surface of the extrusion, then lock the bracket securely into place by tightening the set screw with an Allen wrench. Then tighten the switch into the bracket with a small slotted screwdriver.

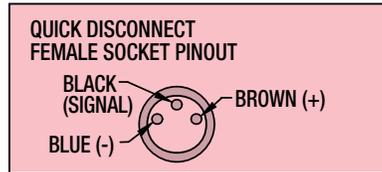

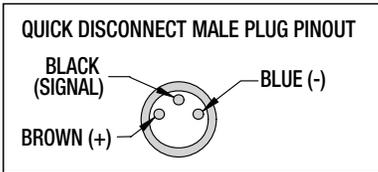

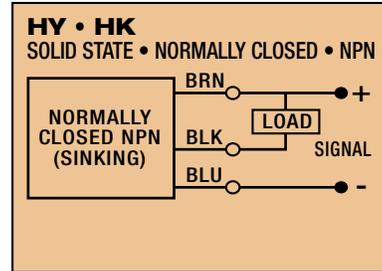

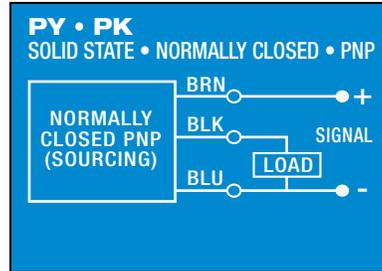

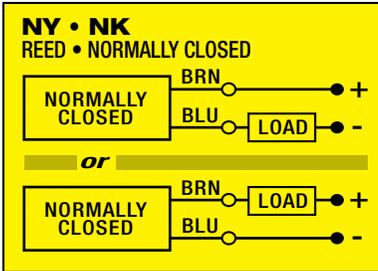

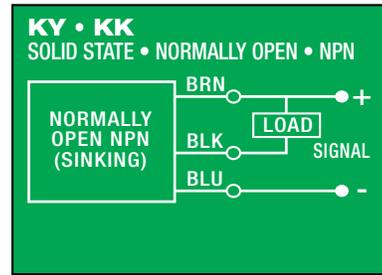

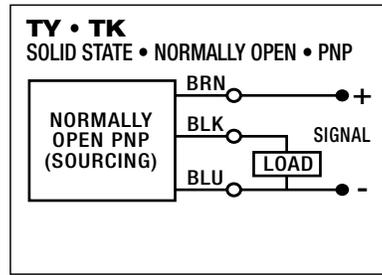

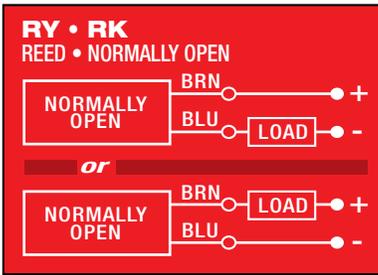

Switch Installation: RSX50

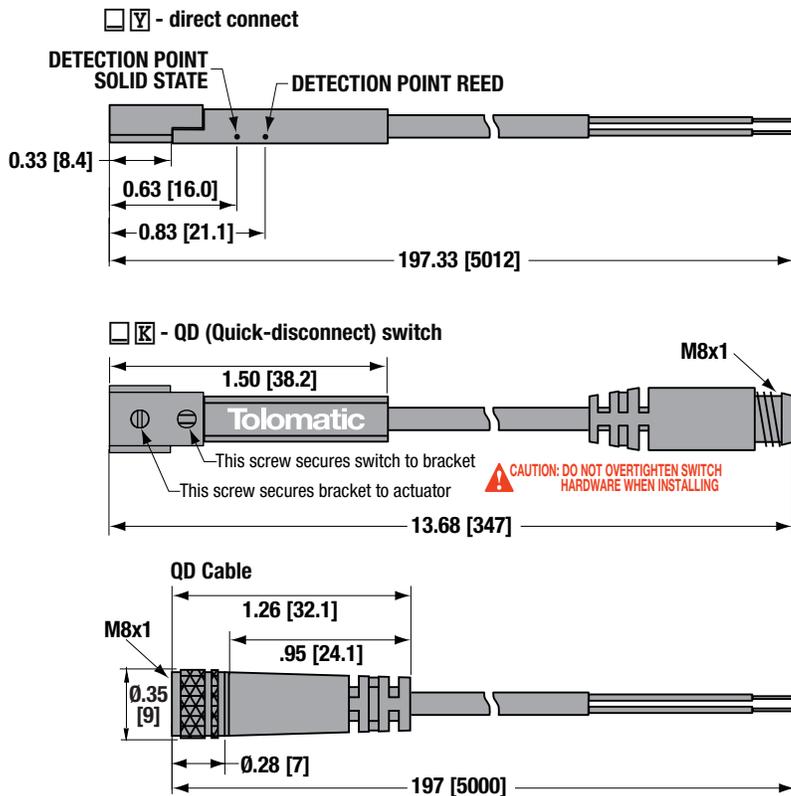

Place switch in the groove on tube at desired location with "Tolomatic" facing outward. While applying light pressure to the switch, rotate the switch is halfway into the groove. Maintaining light pressure, rotate the switch in the opposite direction until it is fully inside the groove with "Tolomatic" visible. Re-position the switch to the exact location and lock the switch securely into place by tightening the screw on the switch.

Supported by Actuator: _____ %
Moment Prevention: Guided/Supported
Center of Load:
D_x: _____ in mm
D_y: _____ in mm
D_z: _____ in mm
Assign to Moves: Extend Retract

Retract

- Move Distance: _____ in mm
 Move Time: _____ seconds
 Max. Speed: _____ in/s mm/s
 Dwell Time After Move: _____ seconds

Force

- Force:** _____ lb_f N
Force Direction: Toward Away
Direction of Applied Force: F_x F_y F_z
Center of Applied Force:
D_x: _____ in mm
D_y: _____ in mm
D_z: _____ in mm
Assign to Moves: Extend Retract

RSX Extreme Force, Hydraulic Class Electric Actuator

Selection Guidelines

1 ESTABLISH MOTION PROFILE

Using the application stroke length, desired cycle time, loads and forces, establish the motion profile details including linear velocity and force in each of its segments.

2 SELECT ACTUATOR SIZE AND SCREW TYPE

Based on the required velocities and forces, select an actuator size including the lead of the roller screw assembly.

3 VERIFY CRITICAL SPEED OF THE SCREW

Verify that the application's peak linear velocity does not exceed the critical speed value for the size and lead of the screw selected.

4 VERIFY AXIAL BUCKLING STRENGTH OF THE SCREW

Verify that the peak force does not exceed the critical buckling force for the size of the screw selected.

5 COMPARE APPLICATION'S PEAK PARAMETERS TO PEAK CAPACITY (PEAK REGION) OF SELECTED ACTUATOR

Calculate the application's required peak force and peak velocity and compare to the graphs. The selection must satisfy the application's peak requirements.

6 CONSIDER THERMAL MITIGATION

Determine whether the oil cooled option is necessary based on the calculated screw thermals in the application.

7 CONSIDER LUBRICATION INTERVAL

Evaluate the recommended lubrication interval with respect to the application motion profile. See page 9 for complete lubrication information.

8 TEMPERATURE CONSIDERATIONS

If the application's ambient temperature lies outside of the standard range (see page 6), contact Tolomatic.

9 SELECT A MOTOR-ACTUATOR CONFIGURATION

Select an inline or a reverse-parallel motor configuration.

10 ESTABLISH TOTAL TORQUE REQUIREMENTS

Calculate total system inertia, the peak and the RMS torque required from the motor to overcome internal friction, external forces and accelerate/decelerate the load.

11 SELECT A MOTOR

Use the obtained total torque value to select a motor and a reduction device (if required). Verify that the peak torque value is below the motor's peak torque curve, and that the continuous torque value is below the motor's continuous torque curve. Verify the minimum torque margin (15%). Verify the inertia match.

12 SELECT OPTIONAL POSITION SENSORS

12 sensor choices include: reed, solid state PNP or NPN, all in normally open or normally closed, with flying leads or quick-disconnect couplers.

13 SELECT ACTUATOR MOUNTING

Mounting options include: TRN trunnion mount, FFG front flange mount, MP2 mounting plates.

14 SELECT ROD END OPTIONS

The default rod end is the SR1 external (male) thread US Conventional. Rod end options include: CLV clevis rod end. Available for the RSX50 is FET internal (female) thread US Conventional.

The above guidelines are for reference only. Use Tolomatic online sizing software for best results.

STROKE LENGTH

SM ___ Enter desired stroke length in millimeters

for Stroke lengths (mm):
RSX50 180, 330, or 630

See page 6 for maximum stroke lengths available

Not all codes listed are compatible with all options. Contact Tolomatic with any questions.

MOTOR MOUNTING

LMI In-line motor mount
 RP1 1:1 ratio, reverse parallel motor mount (belted)
 RP2 2:1 ratio, reverse parallel motor mount (belted)
 RP4 4:1 ratio, reverse parallel motor mount (geared)
 RP6 6:1 ratio, reverse parallel motor mount (geared)

STANDARD OR HIGH TORQUE

ST1* Standard Actuator
 HT1 High Torque Option

*Only available with RP option on RSX10

TRUNNION MOUNT**

TRR Trunnion mount
 NOTE: Trunnion mount is not available for field retrofit, contact Tolomatic for details

**Not available for RSX50

ENVIRONMENTAL PROTECTION

IP65 Standard
 IP67 Ingress protection and thrust rod scraper

ACTUATOR MOUNTING

For all motor mounts:

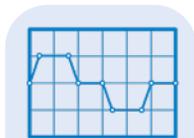

FFG Front Flange Mount
 MP2** Mounting Plates (2 required)
 XT** Extended Tie Rods (min. 50mm, max. 100mm)

**Not available for RSX50

OIL COOLED

OIL For extended high duty cycle/high force performance

NOTE: The RSX actuator with oil cooled option is IP67 rated. To get a motor gasket select IP67 option

YOUR MOTOR HERE

YM _____ Motor mount for non-Tolomatic motor.
www.tolomatic.com/YMH

NOTE: Brakes mounted on reverse parallel motor mounts (especially in vertically positioned actuators) will not prevent back driving of the screw and the load falling under gravity in the event of a timing belt failure. An inline motor mount with a fail-safe brake mounted directly to the actuator shaft or a special geared or thru-shaft reverse parallel construction should be considered if a brake is required in a safety critical application. Contact Tolomatic for alternate reverse parallel brake mounting options.
