

RSX128 Extreme Force Electric Linear Actuator

Tolomatic recommends returning the RSX for most repairs. There are a few procedures that can be done in the field. See the following instructions:

RSX Seal Cartridge Replacement

1. Lock out/Tag out and safely secure the actuator
2. Retract the Thrust Tube if possible
3. Remove tooling from the Rod End of the actuator
4. Remove Front Flange mount if equipped

5. Remove any debris from around the Seal Cartridge
6. Remove the six Cartridge Retainer Bolts and Sealing Washers from the Seal Cartridge
7. Slide the old Seal Cartridge off the Thrust Tube
8. Install new O-Ring on new Seal Cartridge
9. Carefully slide the new Seal Cartridge onto the Thrust Tube and align to the bolt holes in the Head
10. Carefully install new Sealing Washers on the new Cartridge Retainer Bolts
11. Apply Loctite 242 to Cartridge Retainer Bolts and install into new Seal Cartridge

12. Torque Cartridge Retainer Bolts to 80 in-lbf (9 N-m)
13. Reinstall the Front Flange if applicable
 - a. Apply Loctite 271 to the tie rod threads
 - b. RSX128, torque to 220 ft-lbf (298 N-m)

RSX Relubrication

1. Remove the Lube Access Cover from the Cylinder Body

2. Extend or retract the Thrust Tube so that the Grease Zerk on the Nut Assembly is accessible through the access port
3. Pump grease into the Grease Zerk See instructions on next page for lubrication interval and quantity
 - a. Standard grease type is Mobilith 220 unless otherwise specified
4. Fully extend and retract the Thrust Tube to distribute the grease
5. Verify the O-Ring is in place then reinstall the Tube Access Cover onto the Cylinder Body

(Continues)

RE-LUBRICATION RECOMMENDATION:

Lubrication requirements for electric actuators depend on the motion cycle (velocity, force, duty cycle), type of application, ambient temperature, environmental surrounding and various other factors.

For many general purpose applications, Tolomatic ball screw actuators are typically considered lubricated for life unless otherwise specified, such as those actuator models outfitted with a re-lubrication feature. For roller screw or ball screw actuators outfitted with a re-lubrication feature, Tolomatic recommends to re-lubricate the actuator at least once per year or every 1,000,000 cycles, whichever comes first, to maximize service life. For more demanding applications such as

pressing, high frequency or other highly stressed applications, the re-lubrication interval for these actuators will vary and will need to be more frequent. In these demanding applications, it is recommended to execute at least 5 full stroke moves every 5,000 cycles of operation (or more frequent if possible) to re-distribute the grease within the actuator.

Re-lubricate with Tolomatic Grease into the grease port located on the side of the actuator.

	RSX128(P)
Quantity (g)	12.0 + (0.027 x Stroke ^{mm})
Quantity (oz)	0.42 + (0.024 x Stroke ⁱⁿ)

Stroke^{mm} = Stroke length in millimeters

Strokeⁱⁿ = Stroke length in inches

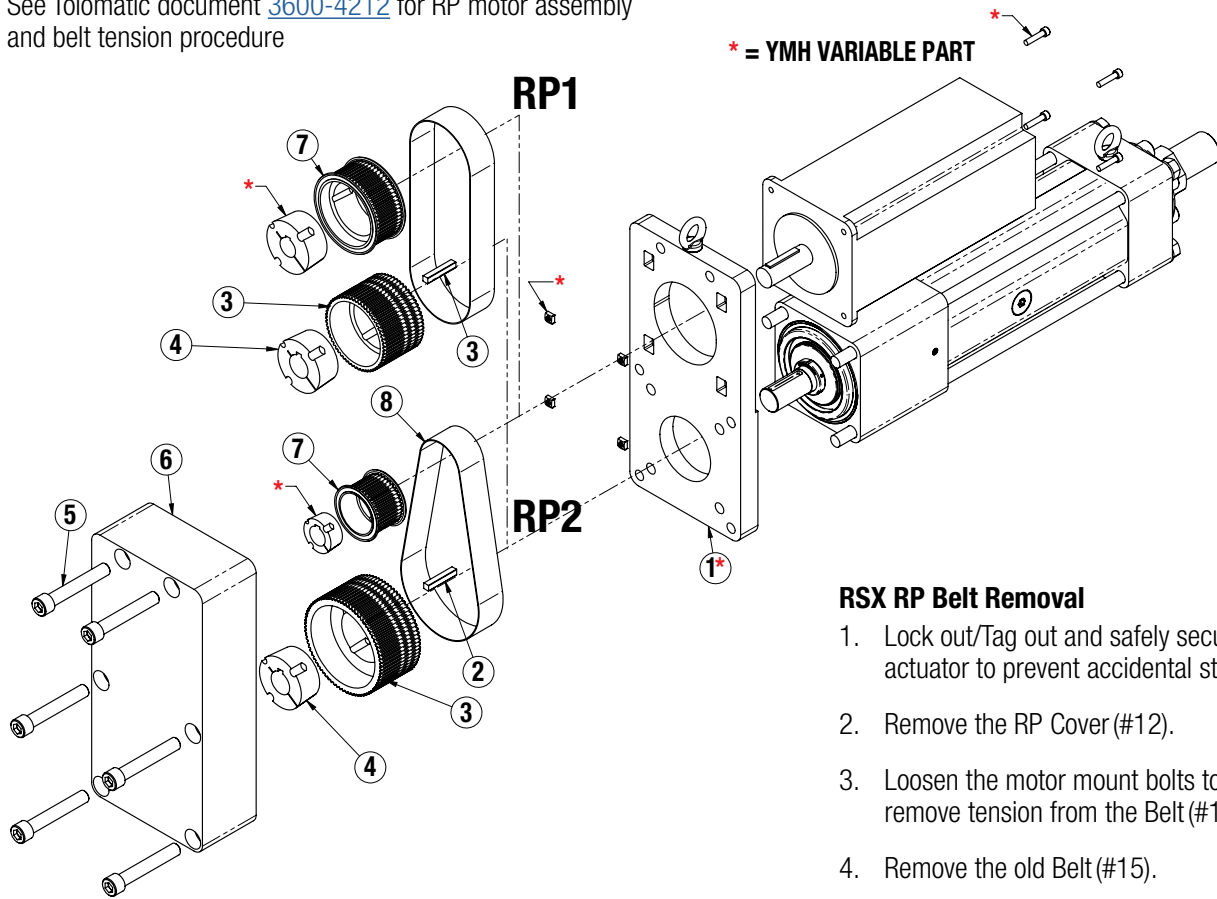

RSX LMI Parts List

ITEM	PART NO	DESCRIPTION	Qty
1	2172-1056	Socket Head Cap Screw	20
2	*	Motor Plate	1
3	2172-1063	O-Ring	2
4	*	Spacer Tube	1
5	*	Coupler Half	1
6	2172-1014	Set Screw	4

RSX RP Parts List

 See Tolomatic document [3600-4212](#) for RP motor assembly and belt tension procedure

RSX RP Belt Removal

1. Lock out/Tag out and safely secure actuator to prevent accidental start up.
2. Remove the RP Cover (#12).
3. Loosen the motor mount bolts to remove tension from the Belt (#15).
4. Remove the old Belt (#15).

SWITCH DETECTION POINT

Dimensions in inches [brackets indicate dimensions in millimeters]

SWITCH INSTALLATION

Place switch bracket onto any one of the four tie rods that run the length of the extruded tube. Insert the switch with set screw and the word "Tolomatic" facing up and slide it the mating slot on the bracket. Position the bracket with the switch to the exact location desired, with the bracket tight to the surface of the extrusion, then lock the bracket securely into place by tightening the set screw with the Allen wrench provided. Then tighten the switch into the bracket with a small slotted screwdriver.
