neplacement Leau Sciew ordening method		

EXAMPLE: RLS MXE50 P	<b>BN02</b>	SK21·2	5 LMI Y	MOTBD	0 DC 7
Lead Screw Bearing J	Nut Style		Motor		Aux. Carrier
Model & Size	& Size	Stroke Length	Orientation	Motor Code	

Auxiliary Carrier Option Note: If replacing a Tube (1.), Dust Band (2.), Magnet Band Kit (3.), Bearing Rail (4.), Nut Rail Kit (5.), or Lead Screw (28.) on an actuator that has an Auxiliary Carrier, be sure to add "DC\_\_\_" to the end of the configuration string when ordering. "DC" indicates the need for additional length and "\_\_\_" indicates the measurement of space between carriers (in inches [SK] or millimeters [SM] as indicated earlier in the configuration string).

# Assembly and Disassembly Instructions

### **GENERAL ACTUATOR DISASSEMBLY INSTRUCTIONS**

Begin with a clean work area. Be sure all replacement parts are present and have no visual damage or defects. The following tools are recommended for proper disassembly and assembly.

- SAE Hex Wrench Set
- Metric Hex Wrench Set
- Torx bit set
- Metric Socket Set
- SAE Socket Set

For best actuator performance it is recommended that the following instructions be read and followed carefully.

### 1. DUST BAND AND CARRIER REMOVAL

Position the actuator with the Dust Band (2) facing up. Remove the Band Clamps (8) from both Heads (7) of the actuator by removing Screws (9) and backing out the Center Set Screw (11) a couple turns. Carefully lift the Dust Band (2) from the slot in each Head (7) and remove any Shims (33) located under the Band (2) in the Head (7) slot. Retain the Shims (33) for reassembly. Remove Screws (23) to release the Carrier (20) from the Nut Bracket Assembly (29). Slide the Carrier (20) clear of the Nut Bracket (29). Remove Nut Bracket End Caps (30) from both ends of the Nut Bracket (29). The Dust Band (2) can now be removed from the actuator.

**NOTE:** If removal of the Bearing Rail (4a) or Bearing Blocks (4b) is necessary, contact the factory prior to removal for specific instructions.

#### 2. LEAD SCREW SUB-ASSEMBLY REMOVAL

On the Non-Drive end of the actuator remove the Screws (19) and remove the Cover Plate (18) and the Lock Nut (17) from Leadscrew (28). Remove the Screws (9) from both of the Heads (7) to the Tube (1). Remove the Non-Drive End Head (7) and the Drive Head (7)/Leadscrew Assembly (28). If necessary, the Nut Bracket Assembly (29) can now be removed from the Leadscrew (28) and the Band Ramps (31) may also be removed from the Nut Bracket Assembly (29) if required.

Ball Nut style: Caution is required if removal of the Nut is necessary. Contact the factory for available parts and procedures.

Plastic Nut style: Plastic Nuts are factory pinned into the Nut Bracket (29) and cannot be removed. If Nuts are worn, a new Nut Bracket Assembly (29) must be ordered.

If Drive End Head (7) and Bearing (13) must be removed from the Leadscrew (28), contact the factory prior to removal for specific instructions.

### **GENERAL CYLINDER ASSEMBLY INSTRUCTIONS**

### 1. INSTALL LEAD SCREW ASSEMBLY AND CARRIER

Install the Band Ramps (31) to the Nut Bracket Assembly (29) with Screws (32). From the Drive End, install the Head (7)/ Leadscrew (28)/Nut Bracket Assembly (29) into the Tube (1) making sure the Bearing Rail (4a) is oriented on the left side of the Tube (1). With the Bumper (25) and Nut Spacer (24) in place, position the Non-Drive End Head (7) over the Leadscrew (28) and loosely install Screws (9) into the Head (7). Install the Drive End Screws (9) loosely into the Drive End Head (7).

### 2. INSTALL DUST BAND AND CARRIER

Install the Dust Band (2) through the Nut Bracket Assembly (29) and install the End Caps (30) onto the Nut Bracket (29). Position Carrier (20) over the Bearing Blocks (4b) and the Nut Bracket (29) and install all Screws (22,23) and leave them loose at this time. By hand, load the Carrier (20) to keep it tight down on the surface of the Bearing Blocks (4b) and tighten the Carrier (20) to Nut Bracket Fasteners (23). Tighten the Carrier (20) to Bearing Block Fasteners (22).

### 3. PERFORM HEAD ALIGNMENT AND FINAL ASSEMBLY

**NOTE:** Custom tooling is used at the factory to align the Heads (7) to the Tube (1) to maintain parallelism between the top of the Head (7) and top of the Tube (1). This is critical to performance and longevity of the Dust Band (2). In the following steps take care to visually align Head (7) to Tube (1).

Move Carrier Assembly (20) to Drive-End of Tube (1) and tighten one of the Head Screws (9). Support the actuator on the Tube (1) so that the Head (7) is free to float while tightening the Head Screws (9).

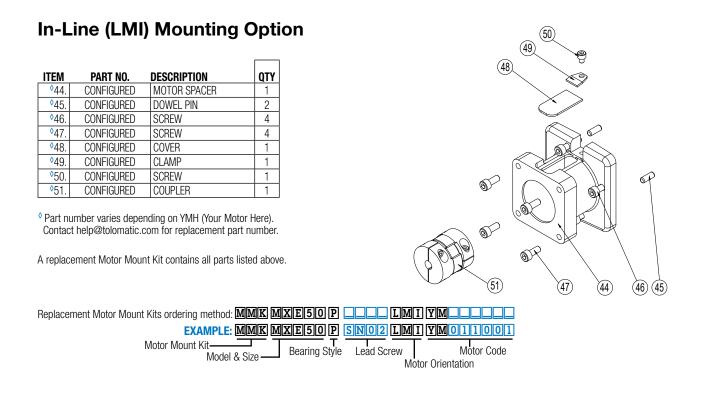

Move Carrier Assembly (20) to idle end of Tube (1) and tighten these Head Screws (9).

Move Carrier Assembly (20) back to the Drive-End of Tube (1) and loosen the Screw (9) that was previously tightened and then tighten all Head Screws (9).

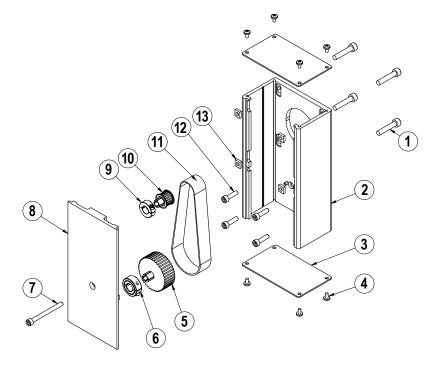

Apply Loctite 242 to Lock Nut (17) and thread onto the Leadscrew (28) and torque to 18-20 in-lbs (2-2.25 N-m).

### 4. INSTALL BAND CLAMPS

Visually examine the interface between the Dust Band (2) surface of the Tube (1) and the clamping surface of each Head (7). This should be flush. It may be necessary to install Shims (33) in the pocket of the Head (7) in order to make flush. Position the Carrier (20) near the motor end, position the Band (2) in the pocket over any previously installed Shims (33) and install the Band Clamp (8) with the two Cap Screws (10). Lastly, tighten down the Center Set Screw (11). Position the Carrier (20) near the Non-Drive End and repeat the steps to install the Band Clamp (8).

# **Reverse Parallel (RP) Mounting Option**

#### **Disassembly Instructions**

- 1. Remove End Caps (3), and release the tension on the Belt (11) by breaking loose the motor fasteners (1).
- 2. Remove the RP Cover (8).
- 3. The Belt (11) can now be removed along with the Motor.
- 4. Remove both Pulleys (10) and (5) from their respective shafts.
- 5. Remove the RP Housing (2) from the actuator head by removing the Fasteners (12).

#### **Assembly Instructions**

Note: Apply Loctite #242 to all fasteners upon installation

- 1. Install RP Housing (2) onto the actuator Head with Fasteners (12).
- 2. Install the Motor to the RP Housing with Fasteners (1) and Square Nuts (13). Do not tighten the fasteners at this time.
- 3. Locate the Belt (11) over the Pulleys (10) and (5) and slide both pulleys over their respective shafts. Tighten each pulley to its shaft with the Collar Clamps (9) and (6).
- 4. Position the Cover (8) in the mating slot of the RP case and install the Fasteners (7) to hold it in place. Take care not to overtighten. If the cover is deflected, it can interfere with the leadscrew.

Part numbers varies depending on YMH (Your Motor Here). Contact help@tolomatic.com for replacement part numbers.

5. Tension the Belt (11) by pulling the motor away from the drive shaft with the appropriate tension force shown in the chart below. While tensioning, the actuator should be positioned so the weight of the motor does not affect the belt tension. Tighten the Motor Fasteners (1) while the tensioning force is applied to the motor.

SMALLEST SI (Motor c	TOTAL WEIGHT TO APPLY			
Inches	Inches mm		kgs	
0.18 to 0.259 4.572 to 6.579		13	5.902	
0.260 to 0.499 6.604 to 12.675		22	9.988	
0.500 to 0.625	12.7 to 15.875	31	14.074	
0.625 and larger 15.875 and larger		40	18.160	

Additional tips are found in Tolomatic <u>Electric Actuator Motor Mounts</u> <u>Technical Note # 3600-4203</u>.

- 6. Verify that there is clearance between the inside of the RP case and each pulley. Verify the pulleys are aligned to each other.
- 7. Install both End Caps (3) with the Screws (4) to finalize the assembly.

Insert Rotate Secure switch switch switch

Place switch in side groove on tube at desired location with "Tolomatic" facing outward. While applying light pressure to the switch, rotate it such that the switch is halfway in the groove. Maintaining light pressure, rotate the switch in the opposite direction until the switch is fully inside the groove with "Tolomatic" visible. Re-position the switch to the exact location and lock the switch securely into place by tightening the screw on the switch.
